CERTIFICATE OF ANALYSIS

13X 31635 (batch A)

Certified Reference Material Information

Type: AUSTENITIC STAINLESS STEEL (WROUGHT)

Form and Size: Disc, ~40mm diameter

Manufactured by: Olarra, Spain

Certified and Supplied by: MBH Analytical Ltd

Assigned Values

Percentage element by weight

| Element | С | Si | Mn | Р | S | Cr | Мо | Ni |

Definitions

- The certified values are the present best estimates of the true content for each element. Each value is a panel consensus, based on the averaged results of an interlaboratory testing programme, detailed on page 3.
- The uncertainty values are generated from the 95% confidence interval derived from the wet analysis results, in combination with a statistical assessment of the homogeneity data, as described on page 2.

Certified by:

Method of Preparation

This reference material was produced from commercial bar with a composition similar to UNS S31635. The steel was arc-furnace melted and AOD treated prior to continuous-casting and hot rolling to final dimension.

Sampling

Samples for chemical analysis were taken from various positions throughout the batch. Approximately 10% of all discs were selected for non-destructive homogeneity testing.

Homogeneity

Samples representative of the batch were checked for uniformity using an optical emission spectrometer. Multiple measurements were taken from each surface under test.

Using the meaned data from each surface, standard deviation values were derived for each element as an indicator of any non-homogeneity (as determined for the specific sample size taken by the spectrometer).

Chemical Analysis

Analysis was carried out on millings taken from samples representative of the product. It was performed by a panel of laboratories operating within the terms of EN ISO/IEC 17025 - 2005, using documented standard reference methods and validated by appropriate reference materials.

The individual values listed overpage are the average of each analyst's results.

Estimation of Uncertainties

Each element certified has been analysed by several laboratories, and 95% half-width confidence intervals (C_(95%)) for the resultant mean values have been derived by the method shown on page 3.

As a separate exercise, the degree of non-homogeneity of the batch for each element has been quantified by a programme of non-destructive application testing, discussed above.

The final certified uncertainty for each element has been derived by combining these two factors, using the square-root of the summed squares.

Traceability

Much of the analytical work performed to assess this material has been carried out by laboratories with proven competence, as indicated by their accreditation to a national authority. It is part of the requirement for this accreditation that analytical work should be performed with due traceability, via an unbroken chain of comparisons, each with stated uncertainty, to primary standards such as the mole, or to nationally- or internationally-recognised primary reference materials. In addition, some of the results derived as part of this testing programme have traceability to NIST standards, as part of the analytical calibration or process control.

Usage

Intended use: With optical emission and X-ray fluorescence spectrometers.

Recommended method of use:

Steels are generally prepared by linishing, grinding, turning or milling. However, users are recommended to follow the calibration and sample preparation procedures specified by the relevant instrument manufacturer.

Preparation should be the same for reference materials and the samples for test.

For optical emission spectroscopy, a minimum of five consistent replicate analyses is recommended to provide the necessary sample size. Users are advised to check against possible bias between reference materials and production samples due to differences in metallurgical history, and be aware of possible inter-element effects.

Analytical Data

Note: $C_{(95\%)}$ is the 95% half-width confidence interval derived from the equation:

 $C_{(95\%)} = (t \times SD)/\sqrt{n}$

where n is the number of available values, t is the Student's t value for n-1 degrees of freedom, and SD is the standard deviation of the test results.

Participating Laboratories

| Exova Ltd. | Middlesbrough, UK | UKAS accreditation | 0239 |
|--|--------------------------|------------------------|-------|
| Metals Technology (Testing) Ltd. | Sheffield, UK | UKAS accreditation | 0963 |
| Universal Scientific Laboratory Pty Ltd | Milperra, NSW, Australia | NATA accreditation | 0492 |
| Shanghai JinYi Test Technology Co. Ltd | Shanghai, China | CNAL accreditation | 0783 |
| Shandong Metallurgical & Science Research | Jinan, Shandong, China | CNAS accreditation | 1461 |
| Bureau Veritas CPS Ltd. | Chennai, India | NABL accreditation | 0025 |
| TCR Engineering Services PVT. Ltd. | Mumbai, India | NABL accreditation | 0367 |
| Raghavendra Spectro Metallurgical Laboratory | Bangalore, India | NABL accreditation | 0371 |
| Instytut Metalurgii Zelaza | Gliwice, Poland | PCA accreditation | AB554 |
| TEC Eurolab SRL | Modena, Italy | ACCREDIA accreditation | 52 |
| AMG Superalloys UK Ltd | Rotherham, UK | | |
| Mineral and Metallurgical Laboratories | Bangalore, India | | |
| Analyticka Laborator Lithea sro | Brno, Czech Republic | | |
| PT Geoservices Ltd. | Cikarang, Indonesia | | |

Note: to achieve the above-noted accreditation (eg UKAS, NATA, etc), test houses must demonstrate conformity to the general requirements of EN ISO/IEC 17025.

Coleshill, UK

Analytical Methods Used

Coleshill Laboratories Ltd

| ELEMENT | | RESULT No. & METHOD | | | | |
|------------|-----------------------|---------------------|--------------|---|--|--|
| | ICP-AES | FAAS | | OTHER | | |
| Carbon | - | - | all | combustion (infra-red detection) | | |
| Silicon | 4, 6, 9, 11 | - | 1, 7, 8, 10 | gravimetric (perchloric acid) | | |
| | | | 2, 3, 5 | photometric (molybdenum blue) | | |
| Manganese | 3, 5-7, 9, 12 | 4, 8 | 2, 10 | volumetric (arsenite, fas) | | |
| | | | 1, 11 | photometric (periodate) | | |
| Phosphorus | 1, 2, 4, 6, 8, 10 | - | 7, 11, 12 | volumetric (alkalimetric) | | |
| | | | 3, 5, 9 | photometric (molybdenum blue) | | |
| Sulfur | 5, 7 | - | 1-4, 6, 8-14 | combustion (IR or volumetric detection) | | |
| Chromium | 1, 2, 6, 9-11 | - | 3-5, 8, 12 | volumetric (ferrous ammonium sulfate) | | |
| | | | 7 | photometric (diphenyl carbazide) | | |
| Molybdenum | 1, 5-7, 10, 12, 13 | 3, 8 | 2, 4, 9, 11 | photometric (thiocyanate) | | |
| Nickel | 3, 4, 9, 11, 12 | 6 | 1, 2, 6, 7 | gravimetric (dimethyl glyoxime) | | |
| | | | 8, 10 | photometric (dimethyl glyoxime) | | |
| Aluminium | 4-7, 9 | 1, 8 | 2, 3 | photometric (chrome azurol s) | | |
| Cobalt | 2-5, 7 | 6, 8, 9 | 1 | photometric (2beta-naphtol) | | |
| Copper | 2, 4, 6-8, 10, 12 | 3, 5, 9 | 1, 13 | photometric (BCO) | | |
| | | | 11 | volumetric (thiosulfate) | | |
| Niobium | 1-6, 9-10 | 7 | 11 | photometric (chlorosulfophenol) | | |
| | | | 8 | gravimetric | | |
| Titanium | 1-3, 5, 8, 10, 13, 14 | 4, 6, 7 | 9, 11, 12 | photometric (DAP, peroxide) | | |
| Vanadium | 1, 2, 6-8, 10, 12 | 4, 5, 9 | 3, 11 | volumetric (ferrous ammonium sulfate) | | |
| Tungsten | 1-4, 8, 9 | 6 | 5 | photometric (thiocyanate) | | |
| | | | 7 | gravimetric | | |
| Nitrogen | - | - | 1-3, 5 | inert gas fusion (thermal conductivity) | | |
| | | | 4, 6 | photometric (nessler reagent) | | |
| | | | 7 | volumetric (hydrochloric acid) | | |

Notes

This Certified Reference Material has been produced and certified in accordance with the requirements of ISO Guide 34-2009, ISO Guide 31-2015 and ISO Guide 35-2006, taking into account the requirements of the ISO Guide to the Expression of Uncertainty in Measurement (GUM).

This certification is applicable to the whole of the disc. However, in accordance with normal practice for OES, it is appropriate to avoid usage of the central portion of ~ 8mm diameter.

This material will remain stable indefinitely, provided adequate precautions are taken to protect it from cross-contamination, extremes of temperature and atmospheric moisture. All production records will be retained for a period of 20 years from the date of this certificate. Technical support for this certification will therefore expire in May 2036, although we reserve the right to make changes as issue revisions, in the intervening period.

This sample is also available in the form of chippings.

The manufacture, analysis and certification of this product were supervised by C. Eveleigh, Technical Director, MBH Analytical Ltd.

The material to which this certificate of analysis refers is supplied subject to our general conditions of sale.
